

🔗 = Recommended pair for best results

*If using a rabbit host primary antibody, Protein A or Protein G should not be used in the IP step. Instead, use TrueBlot® Rabbit Ig IP beads in either a magnetic or agarose format. Protein A or Protein G may be used for mouse, goat, or sheep primary antibodies depending on the species/subtype and desired elution conditions; however, for best results, use the corresponding TrueBlot® Ig IP beads.
